

AI setup & consulting

Help your team get useful work from AI.

We configure your selected AI tools around the work you want to do, connect the agreed context and tools, and walk your team through using them.

Service overview

fortitudo.agency

An account is a starting point, not a working setup.

For people or teams adopting an AI tool or fixing a setup that does not work as intended.

If you need a new application or custom agent, we scope that as a separate build.

Accounts without a working process

The team has access, but no defined workflow to configure or try.

A setup that does not connect

The right context, repository or business tools are missing from the environment.

An uncertain handover

Users do not know how to operate the setup or what it will cost to run.

A configured environment your team knows how to use.

A setup plan for the chosen product and account

The agreed context, tools and workflow connections

Installation or workspace configuration through the supported route

A walkthrough, usage guidance and configuration handover

Why work with us.

Choose a setup for the work

We establish the intended workflow and verify the exact product, account and supported access.

Connect what the team needs

Instructions, business context and agreed tool connections are configured around realistic tasks.

Know how to use it

A walkthrough and usage guidance cover the setup, operating controls and ongoing costs.

From the first conversation to a clear handover.

01 Identify the exact product, account and intended workflow.

02 Review access, permissions and setup requirements.

03 Install or configure the supported environment.

04 Walk through representative tasks and hand over guidance.

First checkpoint: verify the product, account and access needed for your intended workflow.

A working result, checked together.

We agree what success looks like before delivery, then review the work against it.

The intended users can access the configured environment.

Agreed tools and context work in representative tasks.

The team understands operating controls and ongoing costs.

Configure the environment around the workflow.

Hermes and OpenClaw

Configure the selected agent environment, models, instructions, skills and tool access. Customize it for the workflow you want to run.

ChatGPT / ChatGPT Work

Scope the available workspace, account configuration, knowledge, tool connections and working practices. Hosted setup is distinguished from custom API development.

Verify the product, access and setup path.

Claude and Claude Code

Configure supported product access and the relevant document or coding workflow. For coding use, include repository instructions, development tools and review practices.

Grokbot setup and consultation

Review the exact Grokbot product and deployment you mean, then define the supported installation, configuration or consulting scope. We verify product identity and access before quoting.

Start at the right scale.

Platform and agent setup

Configure the selected supported AI environment and hand it over.

AI adoption consultation

Choose tools and workflows, diagnose setup issues and plan implementation.

A clear scope before the work begins.

What we need from you

The exact product, authorized account access, devices or workspace and target workflows.

What shapes the scope

Products and user count · Workspace versus local deployment · Connections and training requirements

Scope and responsibilities

Provider subscriptions and eligibility are separate. Setup means the supported installation or hosted configuration path for the selected product.

Your written proposal confirms price, timing, responsibilities, review points and final inclusions.

Before you decide.

Can you advise before we choose a platform?

Yes. Consultation can compare the available options against your workflows and constraints before any setup.

Does setup include a custom application?

Only when explicitly scoped. Product configuration, custom agent development and custom software are different deliverables.

Let's make the setup work.

Tell us which tools you use or are considering, and what you want the team to do with them. We'll define the setup or consultation you need.
