

Know what to build, fix or change next.

We inspect the problem or proposal, compare the practical options and give you a written recommendation with the next steps.

Make the next commitment with the important questions answered.

For a technical decision, an unexplained problem or a proposed build that needs a closer review.

The review stands on its own. You do not have to hire us to implement it.

Too many plausible options

Platforms, architectures or suppliers offer different tradeoffs without a clear recommendation.

A problem without a diagnosis

Symptoms are visible, but the evidence does not yet explain the cause.

A proposal with unanswered questions

Dependencies, ownership or acceptance remain unclear before work begins.

A written recommendation you can act on.

The questions to answer and an agreed inspection scope

A review of the relevant product, system or documents

Practical options with dependencies and tradeoffs

A written recommendation and prioritized next steps

Why work with us.

Focus the review on your decision

We agree the questions and inspection scope before the work starts.

Understand the tradeoffs

The assessment explains the evidence, assumptions, options and gaps that matter to the decision.

Use the plan with the team you choose

The written recommendation and next steps are yours to take to Fortitudo, your team or another provider.

From the first conversation to a clear handover.

01 Agree the decision and the questions the engagement must answer.

02 Inspect the relevant system, documents and constraints.

03 Compare options and discuss the implications with your team.

04 Deliver the assessment and an actionable next-step plan.

First checkpoint: agree the questions, access and written output before the review begins.

A working result, checked together.

We agree what success looks like before delivery, then review the work against it.

The agreed questions are answered or the remaining evidence gap is identified.

The recommendation explains its tradeoffs and assumptions.

You can take the next steps with us, your team or another provider.

Turn the objective or problem into a plan.

Strategy and implementation planning

Translate a business objective into practical scope, milestones, dependencies and decisions. Consultation spans every service in this catalog.

Diagnosis and troubleshooting

Inspect a website, application, agent or integration that is not behaving as expected. Separate the demonstrated failure from assumptions and recommend the next useful action.

Review the technical and customer experience.

Architecture and platform choices

Compare technical approaches, vendors, data models and operating responsibilities. Explain the implications for cost, delivery, ownership and maintainability.

Product and experience review

Review the structure, interface, content and customer journeys of an existing product or proposed build. Identify specific corrections rather than returning a generic score.

Clarify the implementation before committing.

AI and workflow enablement

Plan or review agent platforms, harnesses, teams, context systems, model workflows, MCP and API integrations, including setup guidance for supported tools.

Proposal and delivery review

Assess another supplier's scope or your current delivery plan. Document unanswered questions, dependencies and acceptance criteria before the next commitment.

Start at the right scale.

A defined consultation engagement

Choose strategy, diagnosis, architecture, product review, enablement or proposal review. Scope the question and written output before work starts.

We agree the deliverables, responsibilities and review points in a written proposal.

A clear scope before the work begins.

What we need from you

The question or problem, relevant links and documents, access needed for inspection, known constraints and the people responsible for the decision.

What shapes the scope

The decision or failure to investigate · System access and review depth · Stakeholders and required outputs

Scope and responsibilities

Detailed reviews are separately scoped work. Implementation, specialist legal advice, formal certification and ongoing operational responsibility are not implied by a consultation.

Your written proposal confirms price, timing, responsibilities, review points and final inclusions.

Before you decide.

What can we consult on?

Every service we offer: websites, ecommerce, software, branding, repairs, AI agents, infrastructure, integrations and creative workflows.

Do we have to hire you for the implementation?

No. The recommendation and written plan are deliverables in their own right. Any follow-on implementation is a separate decision.

Let's clarify the next decision.

Tell us the decision you face or the problem you need to understand. We'll agree the review scope and written output before work begins.
