

AI setup & consulting

A configured environment, connected workflow and practical handover for the people using it.

For an individual, team or business adopting an AI tool or repairing a setup that is not working.

Design. Development. Delivery.

What your business needs.

Setup, configuration and consultation for custom Hermes agents, OpenClaw, ChatGPT / ChatGPT Work, Claude and Claude Code.

Who this is for

For an individual, team or business adopting an AI tool or repairing a setup that is not working.

What we deliver.

A configured environment, connected workflow and practical handover for the people using it.

01 A defined setup plan for the selected product and account

02 Installation or workspace configuration using the supported path

03 Agreed context, tools and workflow connections

04 Operator walkthrough, usage guidance and configuration handover

The work, in detail.

Hermes and OpenClaw

Configure the selected agent environment, models, instructions, skills and tool access. Customize it for the workflow you want to run.

ChatGPT / ChatGPT Work

Scope the available workspace, account configuration, knowledge, tool connections and working practices. Hosted setup is distinguished from custom API development.

The work, in detail.

Claude and Claude Code

Configure supported product access and the relevant document or coding workflow. For coding use, include repository instructions, development tools and review practices.

Grokbot setup and consultation

Review the exact Grokbot product and deployment you mean, then define the supported installation, configuration or consulting scope. We verify product identity and access before quoting.

A scope built around you.

Platform and agent setup

Configure the selected supported AI environment and hand it over.

AI adoption consultation

Choose tools and workflows, diagnose setup issues and plan implementation.

From brief to handover.

- 01 Identify the exact product, account and intended workflow.
- 02 Review access, permissions and setup requirements.
- 03 Install or configure the supported environment.
- 04 Walk through representative tasks and hand over guidance.

How we assess the work.

The intended users can access the configured environment.

Agreed tools and context work in representative tasks.

The team understands operating controls and ongoing costs.

What shapes the proposal.

Products and user count

Provider subscriptions and eligibility are separate. Setup means the supported installation or hosted configuration path for the selected product.

Workspace versus local deployment

Connections and training requirements

Price, timing and responsibilities are agreed in the proposal. Third-party fees and ongoing support are identified separately.

A clear start. Practical ownership.

What we need from you

The exact product, authorized account access, devices or workspace and target workflows.

What happens next

Tell us which tools you use or want to use, and what your team needs them to do.
