

Image, video & audio workflows

Bring the whole creative workflow together.

A workflow that takes approved inputs through generation, review and delivery.

Service overview

fortitudo.agency

When generating an asset is only the first step.

For teams turning repeated creative production into a controlled process inside their own tools.

A brief lost between tools

Brand context and references do not reliably follow the work into generation.

Review scattered across files

Versions, feedback and approvals become difficult to track.

Delivery still done by hand

Jobs finish, but outputs still need organizing, checking and exporting.

From approved brief to reviewed delivery.

A workflow designed around the required formats and creative inputs

Brand context, reference handling and human review steps

Selected model integrations and custom generation agents where needed

File delivery, version tracking and an operator handover

Why work with us.

The actual brief stays in view

Brand context, references and intended placement inform the connected workflow.

Review remains part of production

Generation leads into explicit review and refinement, rather than automatic publishing.

Outputs prepared for their destination

Agreed file types, dimensions and delivery connections are checked end to end.

From the first conversation to a clear handover.

01 Define the outputs, references and intended placements.

02 Test available models against representative creative briefs.

03 Connect generation, review and delivery in the workflow.

04 Run a complete production example and hand over controls.

A working result, checked together.

We agree what success looks like before delivery, then review the work against it.

The workflow delivers the agreed file types and dimensions.

Inputs, versions and review decisions remain traceable.

Failed jobs can be inspected and retried without losing the brief.

Carry the brief into image and video production.

Image generation workflows

Connect brand context, product references, generation, review and export. Define the formats and checks that make an asset usable in its intended placement.

Video workflows

Integrate supported video models, including Seedance where available, into the brief, generation and review process. Handle jobs, status and output delivery.

Connect audio, agents and final review.

Audio and voice workflows

Connect supported audio tools such as ElevenLabs to the agreed voice or audio production workflow, with approved inputs and delivery formats.

Applied creative agents

Build agents that prepare inputs, call the selected models and organize outputs inside an application or business system. Final review remains part of the production workflow.

Start at the right scale.

Creative model workflow

Image, video or audio production connected to review and delivery.

Creative generation agent

A custom agent that operates the agreed production workflow.

A clear scope before the work begins.

What we need from you

Approved brand assets and references, output specifications, account access and a creative reviewer.

What shapes the scope

Media types and model access · Brand context and review workflow · Volume, application and delivery integrations

Scope and responsibilities

Model access, usage fees and content rights are checked during scoping. This is a workflow implementation offer; ongoing content production is a separate scope.

Your written proposal confirms price, timing, responsibilities, review points and final inclusions.

Before you decide.

Is this only image generation?

No. We build image, video and audio workflows, standalone or connected together, and custom agents that operate them.

How do you avoid generic AI output?

We are an anti-slop agency. The workflow carries the actual brief, brand context and intended placement into generation, with explicit review before delivery.

Let's map your production workflow.

Bring examples of the content you produce and the process you repeat.
