

Ecommerce

Make every part of the store work together.

Your brand, catalog and shopping experience, brought
together in a working store.

Service overview

fortitudo.agency

When the storefront and the operation fall out of step.

Open a new store, move to Shopify, or rebuild an existing buying experience.

An inconsistent buying experience

The brand, product pages and checkout journey feel like separate projects.

Too much manual upkeep

Catalog, inventory and customer data move between disconnected tools.

A launch with loose ends

The site is ready, but channels, notifications or store operations are not.

A considered storefront. A working operation.

Brand implementation, with label and identity design when included

Shopify setup, product catalog, collections and store pages

Buying journeys, subscriptions, upsells and eligible sales channels

Inventory, email/SMS connections and a store-operations handover

Why work with us.

A joined-up launch

Brand implementation, catalog setup and the buying experience share one agreed scope.

Connections with a purpose

We connect the store to the inventory, marketing and operating tools it needs.

A store you can operate

Test orders and a practical handover prepare your team for the agreed workflows.

From the first conversation to a clear handover.

01 Review the catalog, brand, platform and operational requirements.

02 Agree storefront layouts, data mappings and order scenarios.

03 Build the store and configure the agreed integrations.

04 Run test orders, verify data and hand over store operations.

A working result, checked together.

We agree what success looks like before delivery, then review the work against it.

The agreed products, variants and collections are ready for sale.

Purchases, accounts and order notifications pass the agreed checks.

Your team can manage products, inventory and connected tools.

Build the brand and the store together.

Brand and product launch

Brand creation, custom brand kits, product label design and implementation. Packaging is prepared against supplied specifications and approved product information; specialist regulatory review remains a separate responsibility.

Shopify foundations

Store setup, domain connection, product and collection creation, inventory setup, SEO foundations, pixel installation and supplied legal pages. We agree catalog size, variants, markets and data quality before quoting.

Connect the buying journey to your operations.

The complete storefront

Homepage, collection and product pages, About the Brand, FAQs, customer accounts and order-tracking pages. Product widgets, promotions, discount popups, subscriptions and upsells are configured to suit the offer and platform.

Data and marketing connections

Product and inventory data ingestion, plus consent-aware email and SMS data flows. Integrations can include Mailchimp, Klaviyo, Shopify Collabs, TikTok Shop and other supported sales and performance tools.

Improve, migrate or connect the store.

Performance and conversion work

Site-speed improvements, advanced upsells, expanded FAQs, quizzes and product discovery. We test important buying journeys and make measurement useful without promising a revenue uplift.

Migration and connected operations

Catalog and content migration, B2B ordering and agreed links to fulfillment, inventory or other business systems. Existing customers and orders require a specific migration and reconciliation plan.

Platform eligibility

Sales-channel access, subscriptions, checkout customization and advertising connections depend on plan, region and account approval. ChatGPT ads and emerging channels are scoped only after current merchant access and a supported integration path are confirmed.

Start at the right scale.

Store launch

A new store from catalog and brand inputs through launch checks.

Brand and product launch

Identity, product labels and launch-ready brand assets.

Migration or B2B ordering

A defined platform transition or wholesale ordering workflow.

Storefront buildout

An agreed set of shopping pages and customer experiences.

Extend or improve what you have.

Commerce data and integrations

Connect catalog, inventory, email, SMS and business systems.

Sales-channel connections

Configure eligible third-party channels and test the connection.

Store improvement sprint

Repair or improve a specific buying or operating journey.

A clear scope before the work begins.

What we need from you

Product data, prices, inventory, brand assets, approved policies, shipping and returns rules, platform access and marketing-consent requirements.

What shapes the scope

Catalog size and data quality · Theme, pages and buying features · Channels, integrations and migration

Scope and responsibilities

Platform plans, payment fees, apps, media spend, printing and ongoing store operation are separate unless expressly included. Legal pages use owner-approved content; implementation is not legal certification.

Your written proposal confirms price, timing, responsibilities, review points and final inclusions.

Before you decide.

Can you handle the brand and product labels too?

Yes. Brand creation, brand kits and product label design can be included with the store. You supply or approve product information and any required specialist review.

Do all integrations work on every Shopify plan?

No. We check the plan, region and account access before committing to a channel or integration. Third-party app costs are listed separately in the proposal.

Let's plan your store.

Share your products, current store and launch requirements. We will define the storefront and operating scope together.
