

Custom AI agents

An agent with a defined job, connected tools and a way to check its work.

Applied Agent Build

Put AI to work inside a real business process, or repair an agent that is unreliable, disconnected or difficult to operate.

A defined task, representative inputs and success criteria

The agent or team, harness, tools and required MCP/API connections

Context, memory, permissions and human review where needed

Evaluation, deployment, operating guidance and ownership handover

Scope. Delivery. Ownership.

Read the offer. Share it with your team. Start a conversation.

Applied Agent Build

The result

A scoped agent or workflow with connected tools, relevant context, operating boundaries and an inspected handover. We are an anti-slop agency: the design and output must hold up to review.

01 A defined task, representative inputs and success criteria

02 The agent or team, harness, tools and required MCP/API connections

03 Context, memory, permissions and human review where needed

04 Evaluation, deployment, operating guidance and ownership handover

Where we start

Show us the task and the systems it touches. We will define what the agent should do, what it may access and how its output will be judged.

What we can build.

Outreach agents

Research prospects from approved sources, prepare personalized outreach, route replies and update your CRM. Sending permissions, approved channels and review steps are defined with your team.

Personal assistants

Connect the documents, calendar, email and business tools you choose. Give the assistant useful context and clear permission to prepare, recommend or carry out specific tasks.

Custom coding agents

Configure repository context, development tools, test commands and review workflows around your codebase. Build a repeatable path from task to checked change.

The details that make it work.

Financial analyst agents

Connect authorized data, extract information and prepare research, comparisons and reports with traceable sources. Your team reviews analysis and financial decisions.

Agents inside your software

Add agent-powered features to an existing application or a new product. Connect accounts, product data, tools and the interface people use to give instructions and review results.

Custom Hermes and OpenClaw agents

Set up and customize the supported agent environment around your workflows. Define models, instructions, skills, tool access, memory and deployment with a documented operator handover.

Choose the work you need.

A focused engagement or a complete build. Each option is scoped and quoted for your business.

Custom agent build

One agent built around a defined business task, with its tools, context and review workflow.

Agent inside an application

An agent-powered product feature connected to the application's accounts, data and customer journey.

Your proposal brings the selected work into one scope, with review milestones, responsibilities and a project price.

A clear path to handover.

01

Define the task, data, permissions and examples of a useful result.

02

Test the uncertain model, tool and integration behavior first.

03

Build the workflow with evaluation, cost limits and recovery.

04

Roll out the agreed scope, document operation and hand over controls.

How we review the result

The system is evaluated against representative tasks and agreed failure cases.

Permissions, review steps and recovery behave as specified.

Your operator can run the workflow, inspect outputs and manage costs.

Know what you are agreeing to.

What we need from you

Task examples, authorized data and tool access, account eligibility, expected volume and an operational owner for approvals and review.

Scope and dependencies

Provider access, model usage, hosting and third-party subscriptions are separate. Outreach requires authorized channels and consent practices. Financial-analysis agents support review; they do not promise returns or unrestricted trading. Agent teams do not imply unlimited autonomous business operation.

Your proposal

Deliverables, milestones, review rounds, responsibilities, price and timeline are set out before work starts. Third-party costs and changes to scope are identified separately.

After handover

Optional care and improvement retainers have an agreed scope and support terms. Ongoing support is a separate choice; ownership does not depend on buying a retainer.

Plan an agent.
