AI Setup & Enablement

The result

A configured environment, connected workflow and practical handover for the people using it.

01 A defined setup plan for the selected product and account

02 Installation or workspace configuration using the supported path

03 Agreed context, tools and workflow connections

04 Operator walkthrough, usage guidance and configuration handover

Where we start

Tell us which tools you use or want to use, and what your team needs them to do.

What we can build.

Hermes and OpenClaw

Configure the selected agent environment, models, instructions, skills and tool access. Customize it for the workflow you want to run.

ChatGPT / ChatGPT Work

Scope the available workspace, account configuration, knowledge, tool connections and working practices. Hosted setup is distinguished from custom API development.

Claude and Claude Code

Configure supported product access and the relevant document or coding workflow. For coding use, include repository instructions, development tools and review practices.

Grokbots setup and consultation

Review the exact Grokbots product and deployment you mean, then define the supported installation, configuration or consulting scope. We verify product identity and access before quoting.

Choose the work you need.

A focused engagement or a complete build. Each option is scoped and quoted for your business.

Platform and agent setup

Configure the selected supported AI environment and hand it over.

AI adoption consultation

Choose tools and workflows, diagnose setup issues and plan implementation.

Your proposal brings the selected work into one scope, with review milestones, responsibilities and a project price.

A clear path to handover.

01

Identify the exact product, account and intended workflow.

02

Review access, permissions and setup requirements.

03

Install or configure the supported environment.

04

Walk through representative tasks and hand over guidance.

How we review the result

The intended users can access the configured environment.

Agreed tools and context work in representative tasks.

The team understands operating controls and ongoing costs.

Know what you are agreeing to.

What we need from you

The exact product, authorized account access, devices or workspace and target workflows.

Scope and dependencies

Provider subscriptions and eligibility are separate. Setup means the supported installation or hosted configuration path for the selected product.

Your proposal

Deliverables, milestones, review rounds, responsibilities, price and timeline are set out before work starts. Third-party costs and changes to scope are identified separately.

After handover

Optional care and improvement retainers have an agreed scope and support terms. Ongoing support is a separate choice; ownership does not depend on buying a retainer.

Set up your AI tools.
