

Consultation

A diagnosis, a recommendation and a written plan for the next decision.

Technical Review & Roadmap

Decide what to build, diagnose a problem, compare platforms or review a proposed implementation.

An agreed set of questions and an inspection scope

Review of the relevant product, system or documents

Practical options, dependencies and tradeoffs

A written recommendation and prioritized next steps

Scope. Delivery. Ownership.

Read the offer. Share it with your team. Start a conversation.

Technical Review & Roadmap

The result

A written assessment, relevant tradeoffs and prioritized next steps. You can act on the recommendation with Fortitudo, your own team or another provider.

01 An agreed set of questions and an inspection scope

02 Review of the relevant product, system or documents

03 Practical options, dependencies and tradeoffs

04 A written recommendation and prioritized next steps

Where we start

Tell us the decision or problem. We will define the review and written output before work begins.

What we can build.

Strategy and implementation planning

Translate a business objective into practical scope, milestones, dependencies and decisions. Consultation spans every service in this catalog.

Diagnosis and troubleshooting

Inspect a website, application, agent or integration that is not behaving as expected. Separate the demonstrated failure from assumptions and recommend the next useful action.

Architecture and platform choices

Compare technical approaches, vendors, data models and operating responsibilities. Explain the implications for cost, delivery, ownership and maintainability.

The details that make it work.

Product and experience review

Review the structure, interface, content and customer journeys of an existing product or proposed build. Identify specific corrections rather than returning a generic score.

AI and workflow enablement

Plan or review agent platforms, harnesses, teams, context systems, model workflows, MCP and API integrations, including setup guidance for supported tools.

Proposal and delivery review

Assess another supplier's scope or your current delivery plan. Document unanswered questions, dependencies and acceptance criteria before the next commitment.

Choose the work you need.

A focused engagement or a complete build. Each option is scoped and quoted for your business.

A defined consultation engagement

Choose strategy, diagnosis, architecture, product review, enablement or proposal review. Scope the question and written output before work starts.

Your proposal brings the selected work into one scope, with review milestones, responsibilities and a project price.

A clear path to handover.

01

Agree the decision and the questions the engagement must answer.

02

Inspect the relevant system, documents and constraints.

03

Compare options and discuss the implications with your team.

04

Deliver the assessment and an actionable next-step plan.

How we review the result

The agreed questions are answered or the remaining evidence gap is identified.

The recommendation explains its tradeoffs and assumptions.

You can take the next steps with us, your team or another provider.

Know what you are agreeing to.

What we need from you

The question or problem, relevant links and documents, access needed for inspection, known constraints and the people responsible for the decision.

Scope and dependencies

Detailed reviews are separately scoped work. Implementation, specialist legal advice, formal certification and ongoing operational responsibility are not implied by a consultation.

Your proposal

Deliverables, milestones, review rounds, responsibilities, price and timeline are set out before work starts. Third-party costs and changes to scope are identified separately.

After handover

Optional care and improvement retainers have an agreed scope and support terms. Ongoing support is a separate choice; ownership does not depend on buying a retainer.

Discuss the decision.
