

Agent harnesses & infrastructure

An execution environment that connects the model, tools, permissions and operating controls.

Service overview / Scope / Delivery / Ownership

fortitudo.agency

What your business needs.

Custom harness creation, installation and deployment for agents that need persistent execution, controlled tools and visibility into what happened.

Who this is for

For a custom agent, an existing harness that needs deployment, or a team moving beyond a local experiment.

What we deliver.

An execution environment that connects the model, tools, permissions and operating controls.

01 A configured or custom-built agent harness

02 Tool execution, task state and permission boundaries

03 Logs, evaluation hooks, usage limits and recovery paths

04 Deployment configuration and operator documentation

The work, in detail.

Custom harness creation

Build the execution loop, tool interfaces, model connections and task state around the way your agent needs to work.

Harness installation and deployment

Deploy a supported existing harness into the agreed environment. Connect accounts, configure access and verify operation after installation.

The work, in detail.

Operating controls

Add run inspection, error handling, retries, time and usage limits, approval boundaries and the controls an operator needs to manage the system.

A scope built around you.

Agent harness and infrastructure

Create or deploy the environment an agent or team runs inside.

From brief to handover.

- 01 Inspect the agent and execution requirements.
- 02 Design model, tool and permission boundaries.
- 03 Build or deploy the harness and operating controls.
- 04 Test normal runs, failures and recovery with your operator.

How we assess the work.

The harness executes the agreed tasks and tools.

Permissions and limits behave as configured.

An operator can inspect failures and recover a run.

What shapes the proposal.

Existing versus custom harness

Execution environment and tools

Persistence, monitoring and recovery

Hosting, model usage and third-party subscriptions are listed separately. The proposal identifies the supported runtime and maintenance responsibility.

Price, timing and responsibilities are agreed in the proposal. Third-party fees and ongoing support are identified separately.

A clear start. Practical ownership.

What we need from you

The current code or platform, deployment access, required tools and operating constraints.

What happens next

Share the agent or harness you have and where it needs to run.
