

Brand creation & implementation

An identity your team can use consistently across the business.

Service overview / Scope / Delivery / Ownership

fortitudo.agency

What your business needs.

We create brand kits and implement them across websites, products and ecommerce. The work covers the identity and the practical assets your team needs to use it consistently.

Who this is for

Launch a brand, bring consistency to an existing one, or carry a new identity into the website and product.

What we deliver.

A usable brand system with the agreed source files, guidelines, templates and implementation scope.

01 Brand direction and the agreed visual identity assets

02 Typography, color and practical usage guidance

03 Templates and applications for the agreed channels

04 Organized source files and implementation handover

The work, in detail.

Direction and identity

Clarify the audience, positioning and visual direction. Develop the agreed identity assets, including the logo treatment, typography, color and image direction.

A working brand kit

Reusable design assets, practical usage guidance and templates for the channels in scope. The kit should be useful to the people creating your next page, product or campaign.

The work, in detail.

Product labels and packaging

Label design and packaging artwork using approved product facts, dimensions and printer specifications. Proofing and specialist regulatory requirements are agreed separately.

Digital implementation

Apply the brand to the website, ecommerce store or software interface. We inspect typography, imagery, layout and key customer journeys together.

The work, in detail.

Content and imagery

Define an image and copy treatment suited to the business. Original asset creation and revisions are scoped against a clear inventory rather than an unlimited creative promise.

A scope built around you.

Custom brand kit

Create the identity assets and guidance needed for a defined launch or refresh.

Brand implementation

Apply an existing or new system across agreed digital surfaces.

Product and brand launch

Connect ecommerce identity, product labels and launch assets.

From brief to handover.

- 01 Review the business, audience and existing assets.
- 02 Agree the direction through representative applications.
- 03 Develop the kit and implement the scoped surfaces.
- 04 Check consistency and hand over the files and usage guidance.

How we assess the work.

The agreed identity assets are supplied in usable formats.

The system holds together across the agreed applications.

Your team can find and use the files and guidelines.

What shapes the proposal.

New identity or implementation

Number of applications

Packaging, templates and content

Trademark clearance, legal claims review, printing and third-party licenses are separate. Deliverables and revision rounds are agreed before production.

Price, timing and responsibilities are agreed in the proposal. Third-party fees and ongoing support are identified separately.

A clear start. Practical ownership.

What we need from you

Business and audience context, existing marks, approved names and copy, required channels, asset inventory and any printer specifications.

What happens next

Share your existing assets and where the brand needs to appear. We will define the identity work and its applications.
