

Consultation

A diagnosis, a recommendation and a written plan for the next decision.

Service overview / Scope / Delivery / Ownership

fortitudo.agency

What your business needs.

Bring a website, store, product or AI system. We help diagnose the problem, compare practical options and turn the decision into a written plan you can use.

Who this is for

Decide what to build, diagnose a problem, compare platforms or review a proposed implementation.

What we deliver.

A written assessment, relevant tradeoffs and prioritized next steps. You can act on the recommendation with Fortitudo, your own team or another provider.

01 An agreed set of questions and an inspection scope

02 Review of the relevant product, system or documents

03 Practical options, dependencies and tradeoffs

04 A written recommendation and prioritized next steps

The work, in detail.

Strategy and implementation planning

Translate a business objective into practical scope, milestones, dependencies and decisions. Consultation spans every service in this catalog.

Diagnosis and troubleshooting

Inspect a website, application, agent or integration that is not behaving as expected. Separate the demonstrated failure from assumptions and recommend the next useful action.

The work, in detail.

Architecture and platform choices

Compare technical approaches, vendors, data models and operating responsibilities. Explain the implications for cost, delivery, ownership and maintainability.

Product and experience review

Review the structure, interface, content and customer journeys of an existing product or proposed build. Identify specific corrections rather than returning a generic score.

The work, in detail.

AI and workflow enablement

Plan or review agent platforms, harnesses, teams, context systems, model workflows, MCP and API integrations, including setup guidance for supported tools.

Proposal and delivery review

Assess another supplier's scope or your current delivery plan. Document unanswered questions, dependencies and acceptance criteria before the next commitment.

A scope built around you.

A defined consultation engagement

Choose strategy, diagnosis, architecture, product review, enablement or proposal review. Scope the question and written output before work starts.

From brief to handover.

- 01 Agree the decision and the questions the engagement must answer.
- 02 Inspect the relevant system, documents and constraints.
- 03 Compare options and discuss the implications with your team.
- 04 Deliver the assessment and an actionable next-step plan.

How we assess the work.

The agreed questions are answered or the remaining evidence gap is identified.

The recommendation explains its tradeoffs and assumptions.

You can take the next steps with us, your team or another provider.

What shapes the proposal.

The decision or failure to investigate

System access and review depth

Stakeholders and required outputs

Detailed reviews are separately scoped work. Implementation, specialist legal advice, formal certification and ongoing operational responsibility are not implied by a consultation.

Price, timing and responsibilities are agreed in the proposal. Third-party fees and ongoing support are identified separately.

A clear start. Practical ownership.

What we need from you

The question or problem, relevant links and documents, access needed for inspection, known constraints and the people responsible for the decision.

What happens next

Tell us the decision or problem. We will define the review and written output before work begins.
